

# MINIMUM

## New generation pressure reducer for M10x1 disposable cylinders

### FEATURES

A very new piston reducer without pressure gauges, complete with quick connection for 6/4mm diameter hose at the outlet and with fixed, non-adjustable operating pressure calibrated to 2 bar. This permits very precise distribution that does not change over time. All the components of the larger range reducers are concentrated in this smaller reducer. The micro-needle valve is integrated directly into the reducer body machining which allows optimal space reduction.

### USE

Suitable for self-adjusting piston technology, or rather automatically adjusts the output CO<sub>2</sub> at the drop of the cylinder pressure while maintaining CO<sub>2</sub> dispersion stable. All of this combined with the safety valve ensures maximum reliability and makes it particularly suitable for both freshwater and marine aquariums.
